School of Computing and Information

School of Computing and Information Partnership Program

The School of Computing and Information at the University of Pittsburgh is answering a worldwide call for more professionals who are capable of building next-generation information systems; enabling users to find the right information; and guiding organizations and governments in sharing, preserving, and protecting data and data sources.

Through a combination of rigorous coursework and hands-on experience, our degree programs help prepare students to become leaders in the information and computing fields.

Corporate partners of the School have exclusive opportunities to engage with our students — from premium recruiting opportunities and partners-only events, to resume book access and concierge support. This program is designed to give you access to tomorrow's leaders by providing us with the means to host events and activities that will connect you with top talent in the fields of information science and computer science.

Our Students at a Glance

1,230

Undergraduate Students*

451

Graduate Students
